

DENTACOIN Assurance

01

The Dentist enrolls Dentacoin Assurance for free and offers a Smart Contract to their Patient.

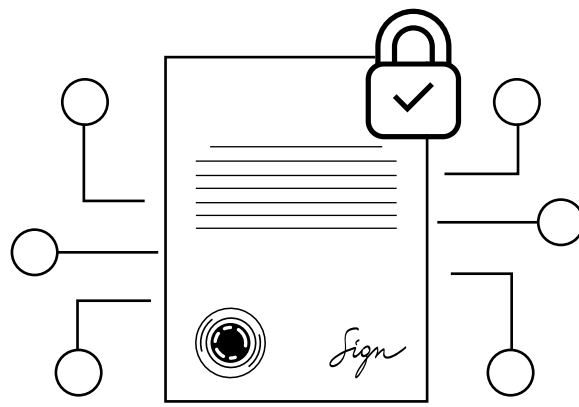

02

They (negotiate and) agree on the terms - monthly premium amount, payment due date, etc.

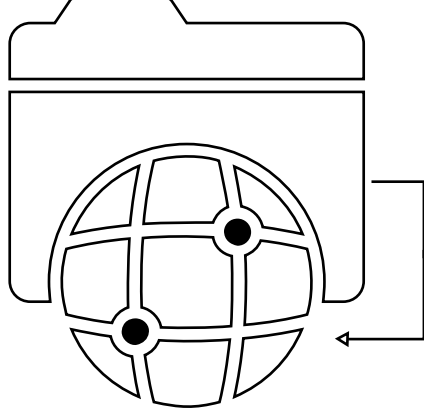

03

A Smart Contract is automatically created and accessible only by the Dentist and the Patient using their private keys.

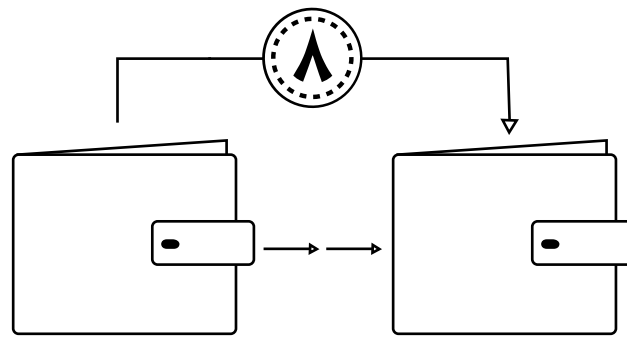

04

A public proof of the Assurance Smart Contract is stored on a distributed file system (IPFS, Swarm, etc.).

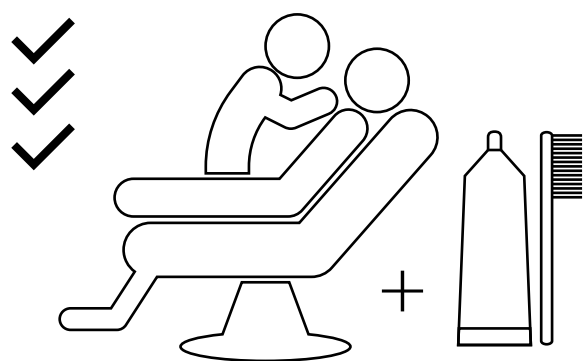

05

Every month, the agreed premium in DCN cryptocurrency is automatically transferred from the Patient's to the Dentist's Wallet address.

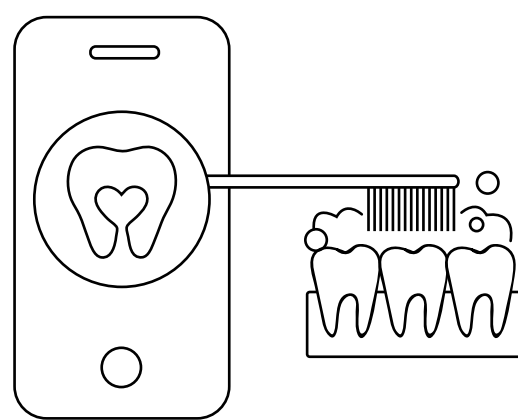

06

The Patient has to visit the Dentist for 3 (three) checkups per year and the individually recommended number of teeth cleanings.

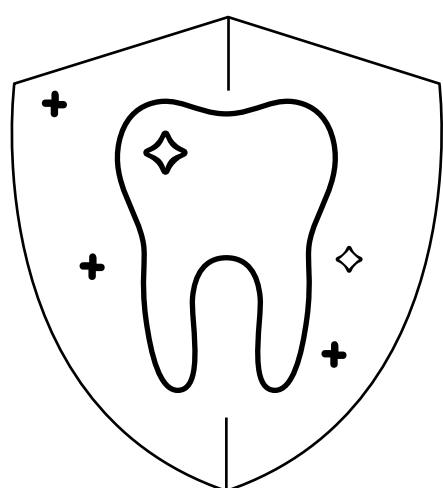

07

To improve at-home oral care, the Patient has to complete at least one 90-day Dentacare App challenge.

08

The Dentist provides the essential preventive services and covers occurring treatments.

WIN - WIN

The Dentist reinforces their monthly income and builds solid, lifelong relations with the Patient.

The Patient receives prevention-focused dental care and avoids high costs and pain against affordable monthly fees.

The Dentist and the Patient benefit from a secure, user-friendly and fully automated payment and notification system.
